African Lungfish

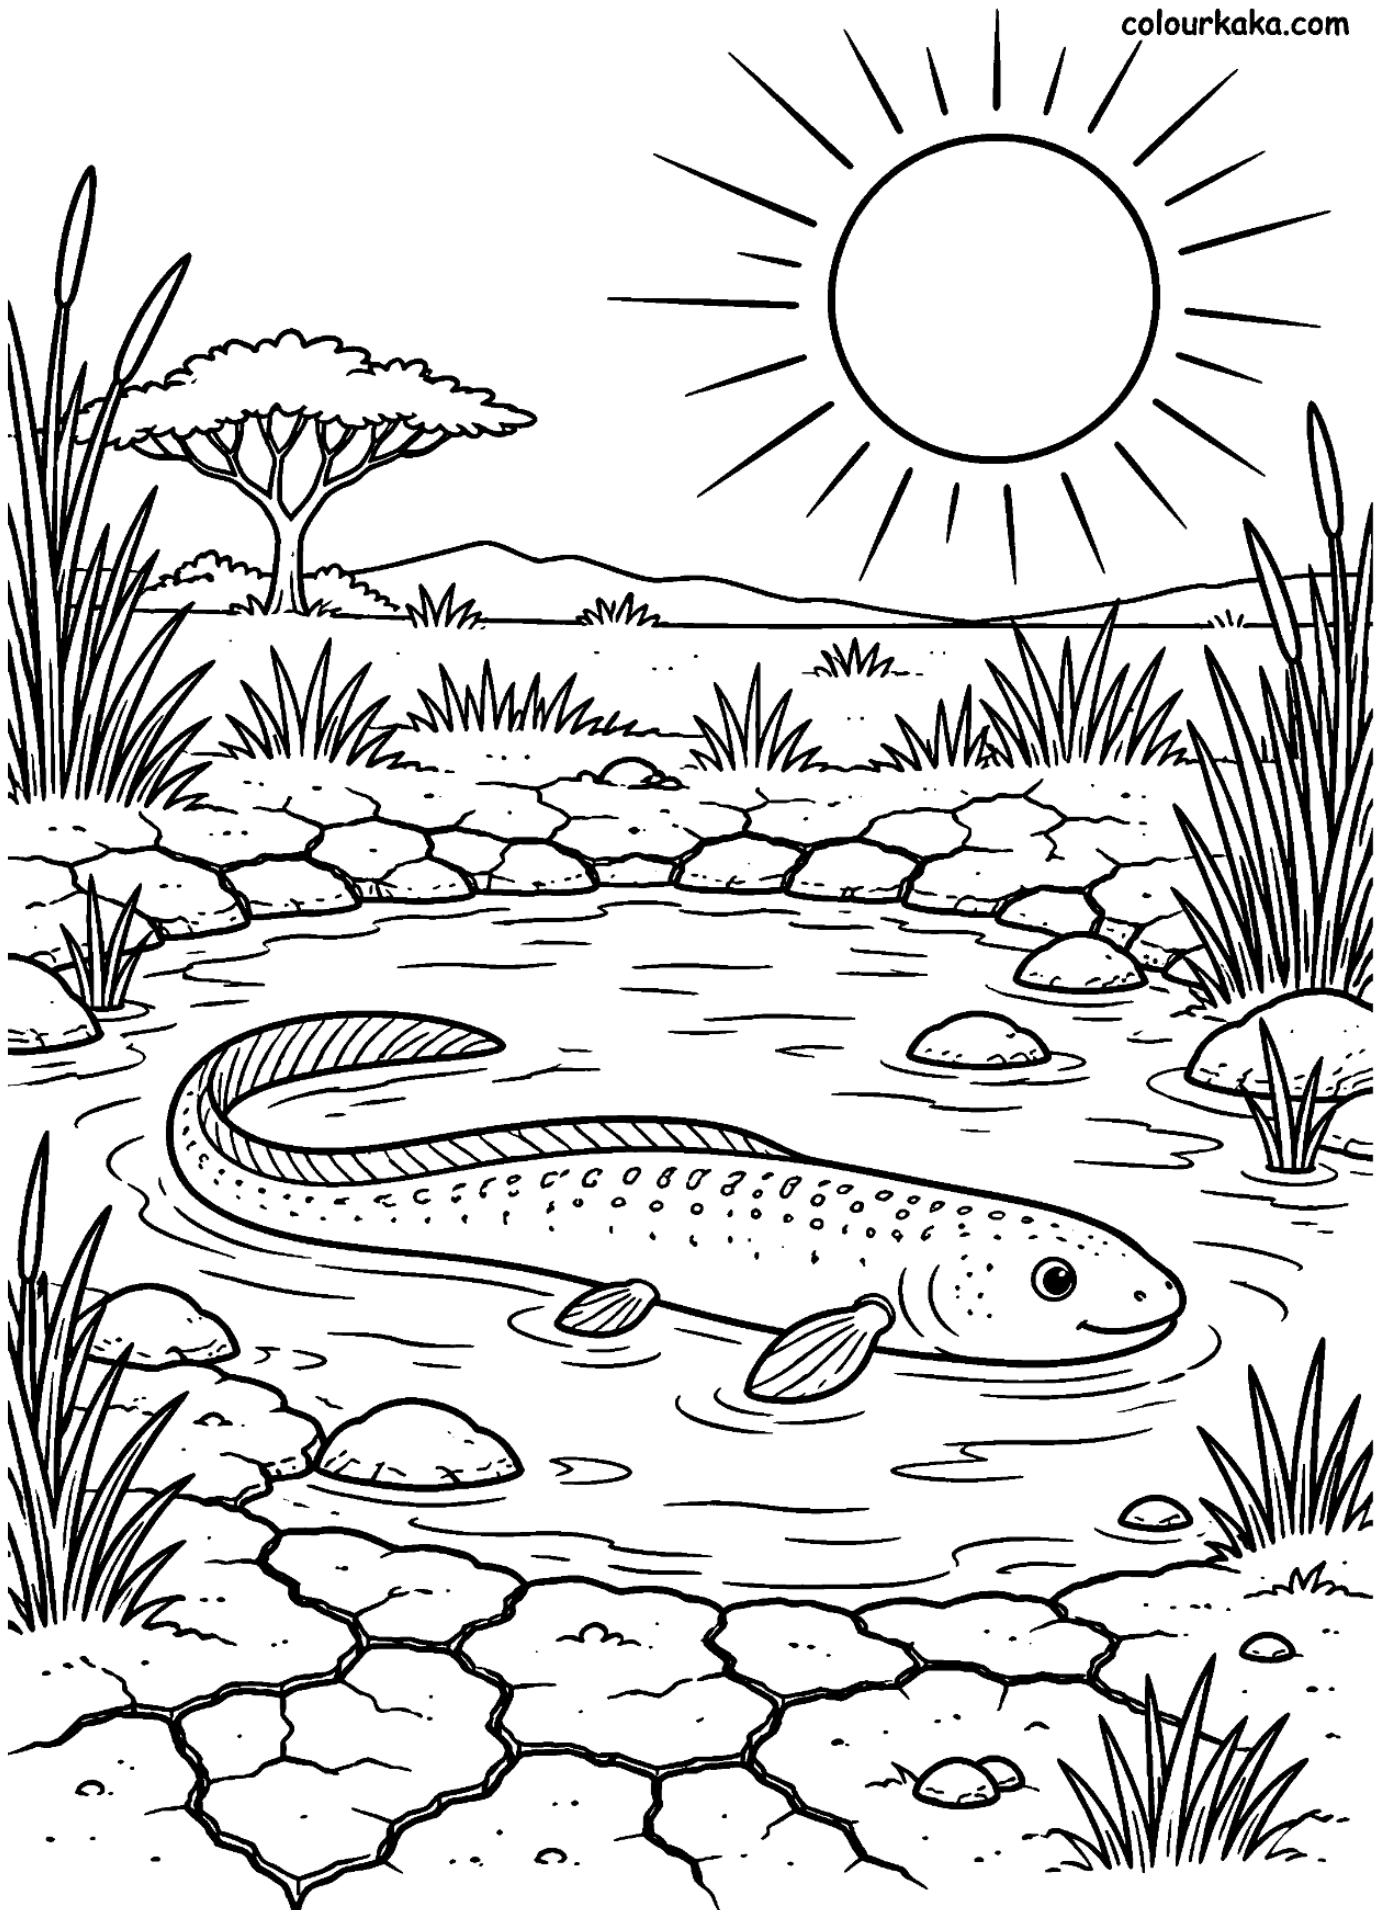

Drought Survival Story

12

Fun Colouring
Pages for Kids

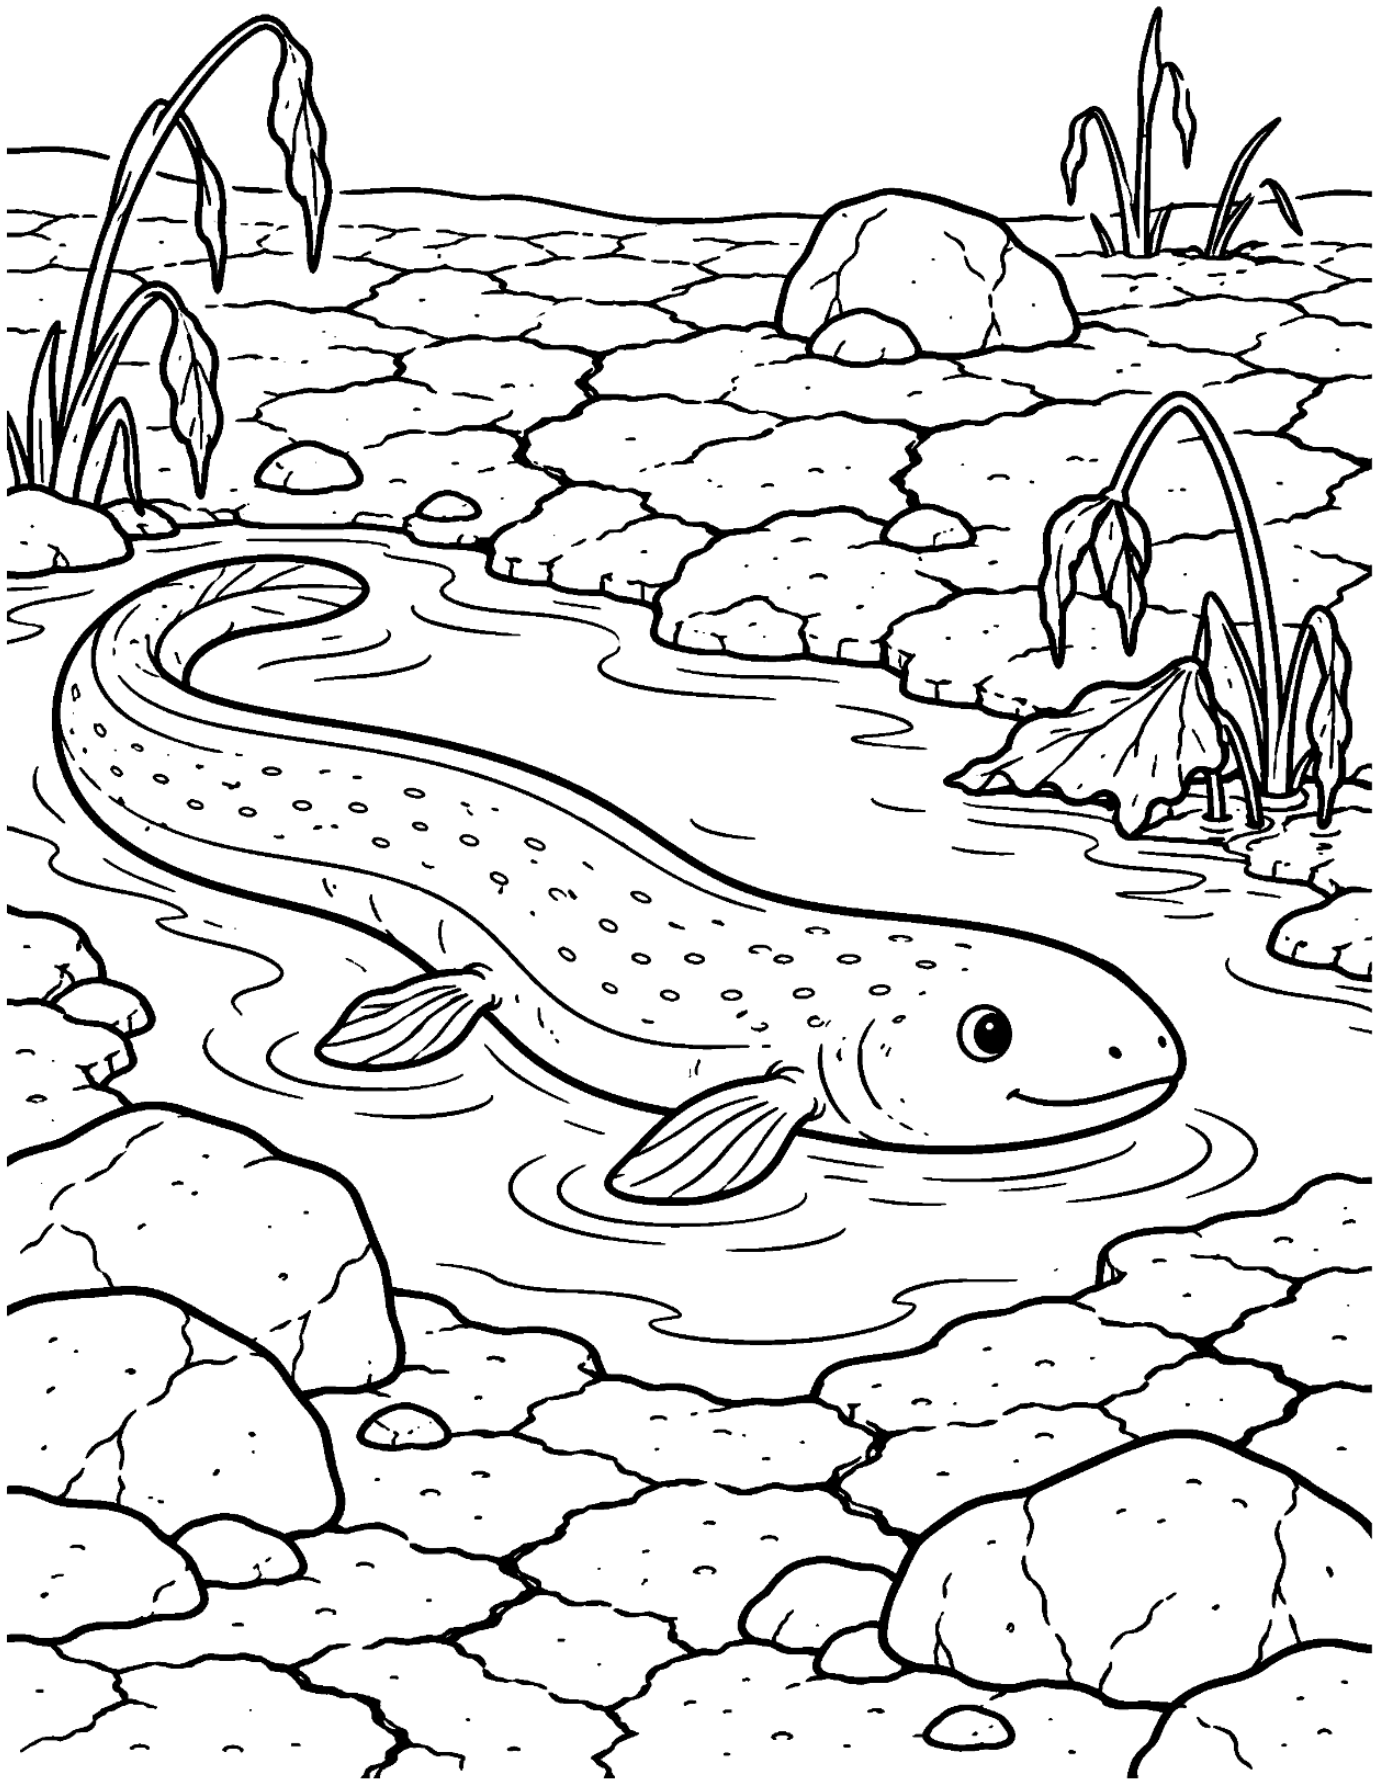

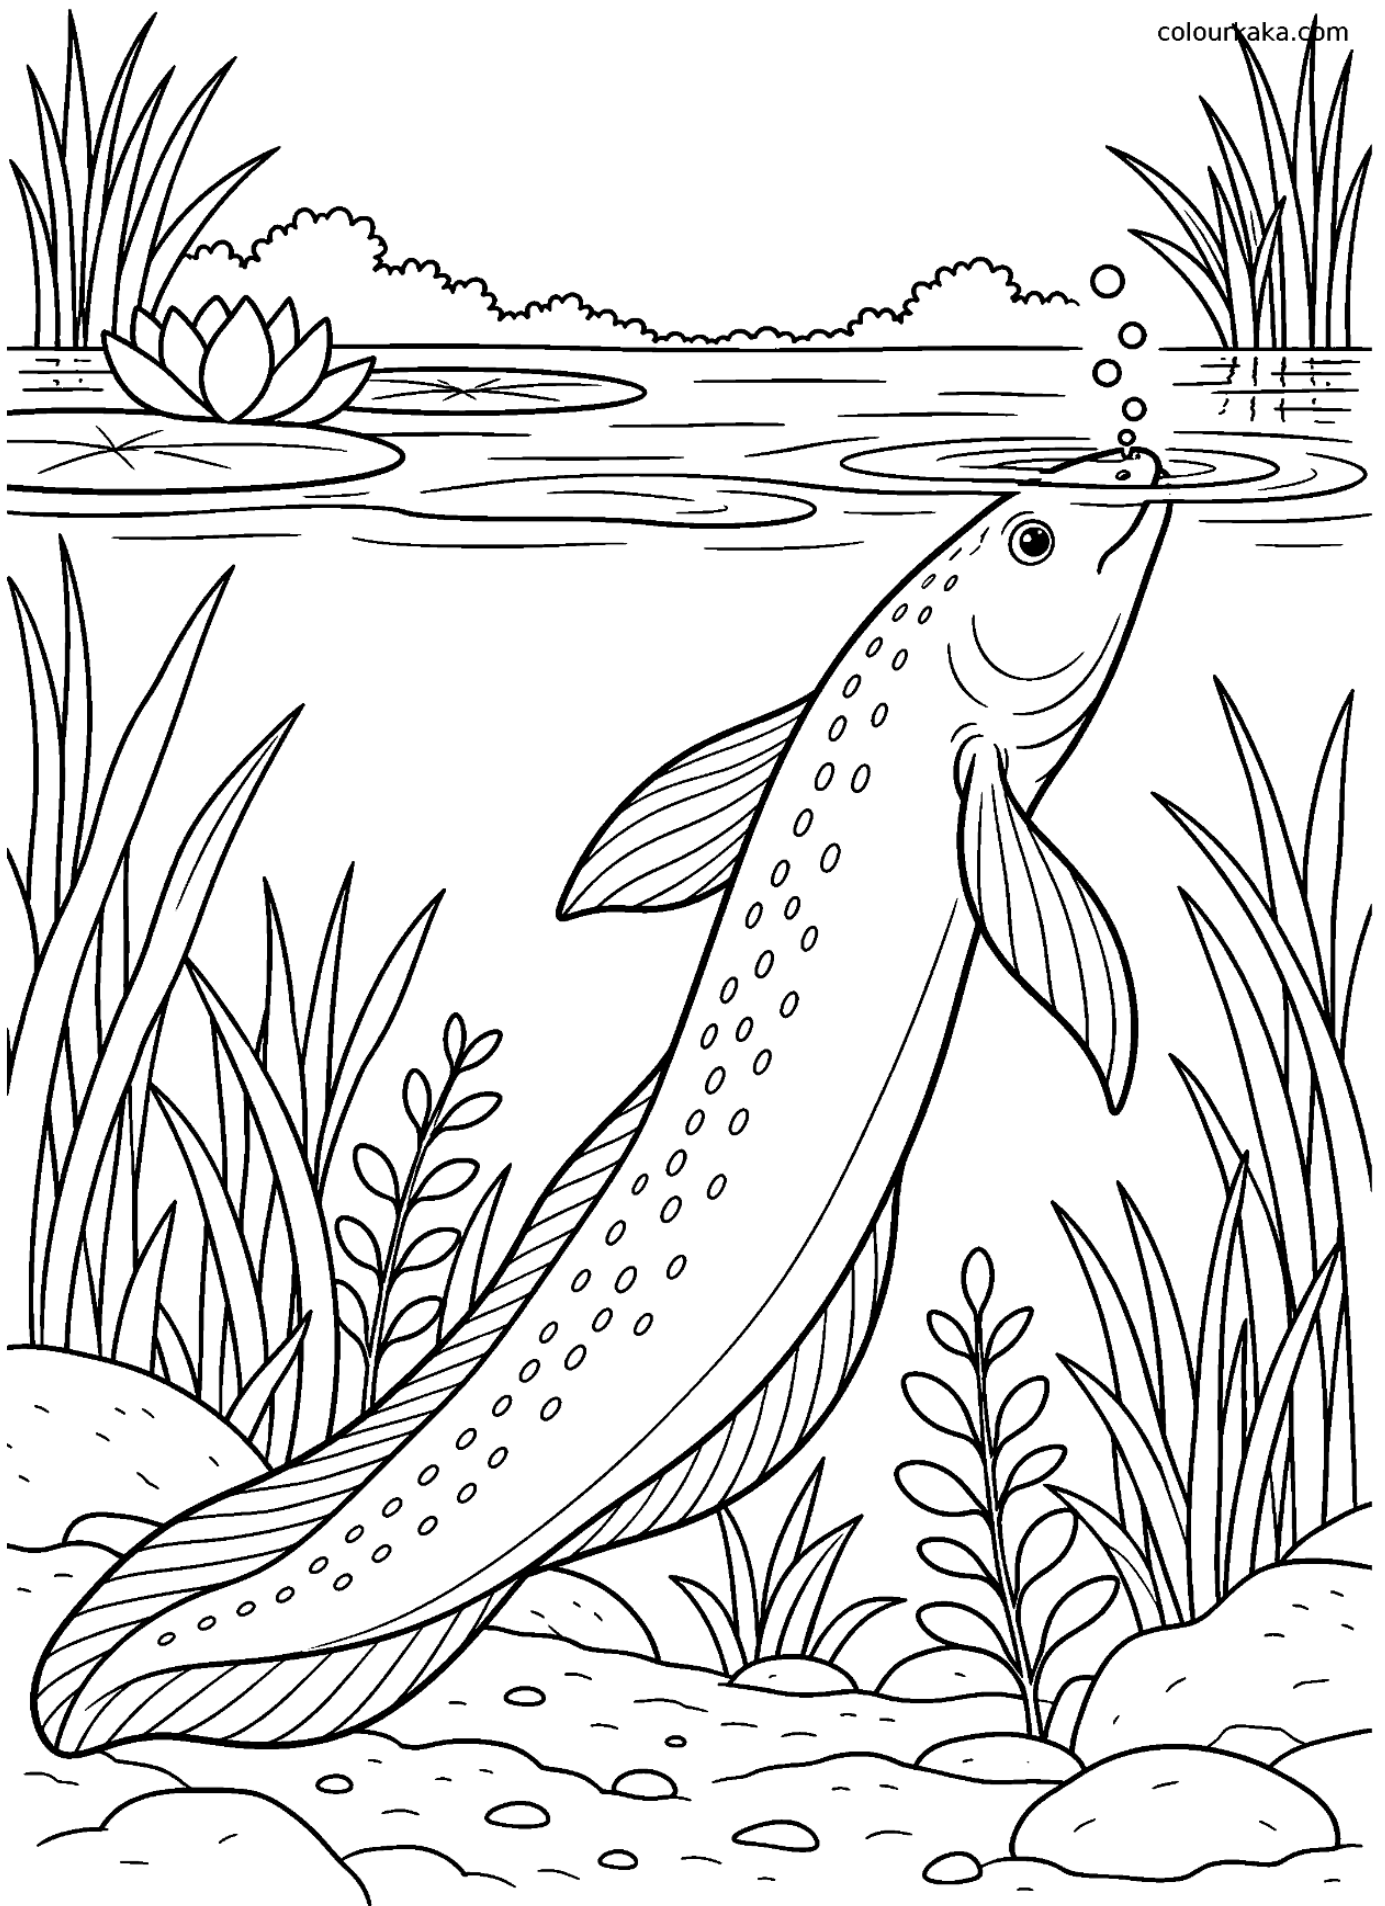

Phew! What a hot day!

The sun is drying the pond. Our lungfish is getting ready for the dry season.

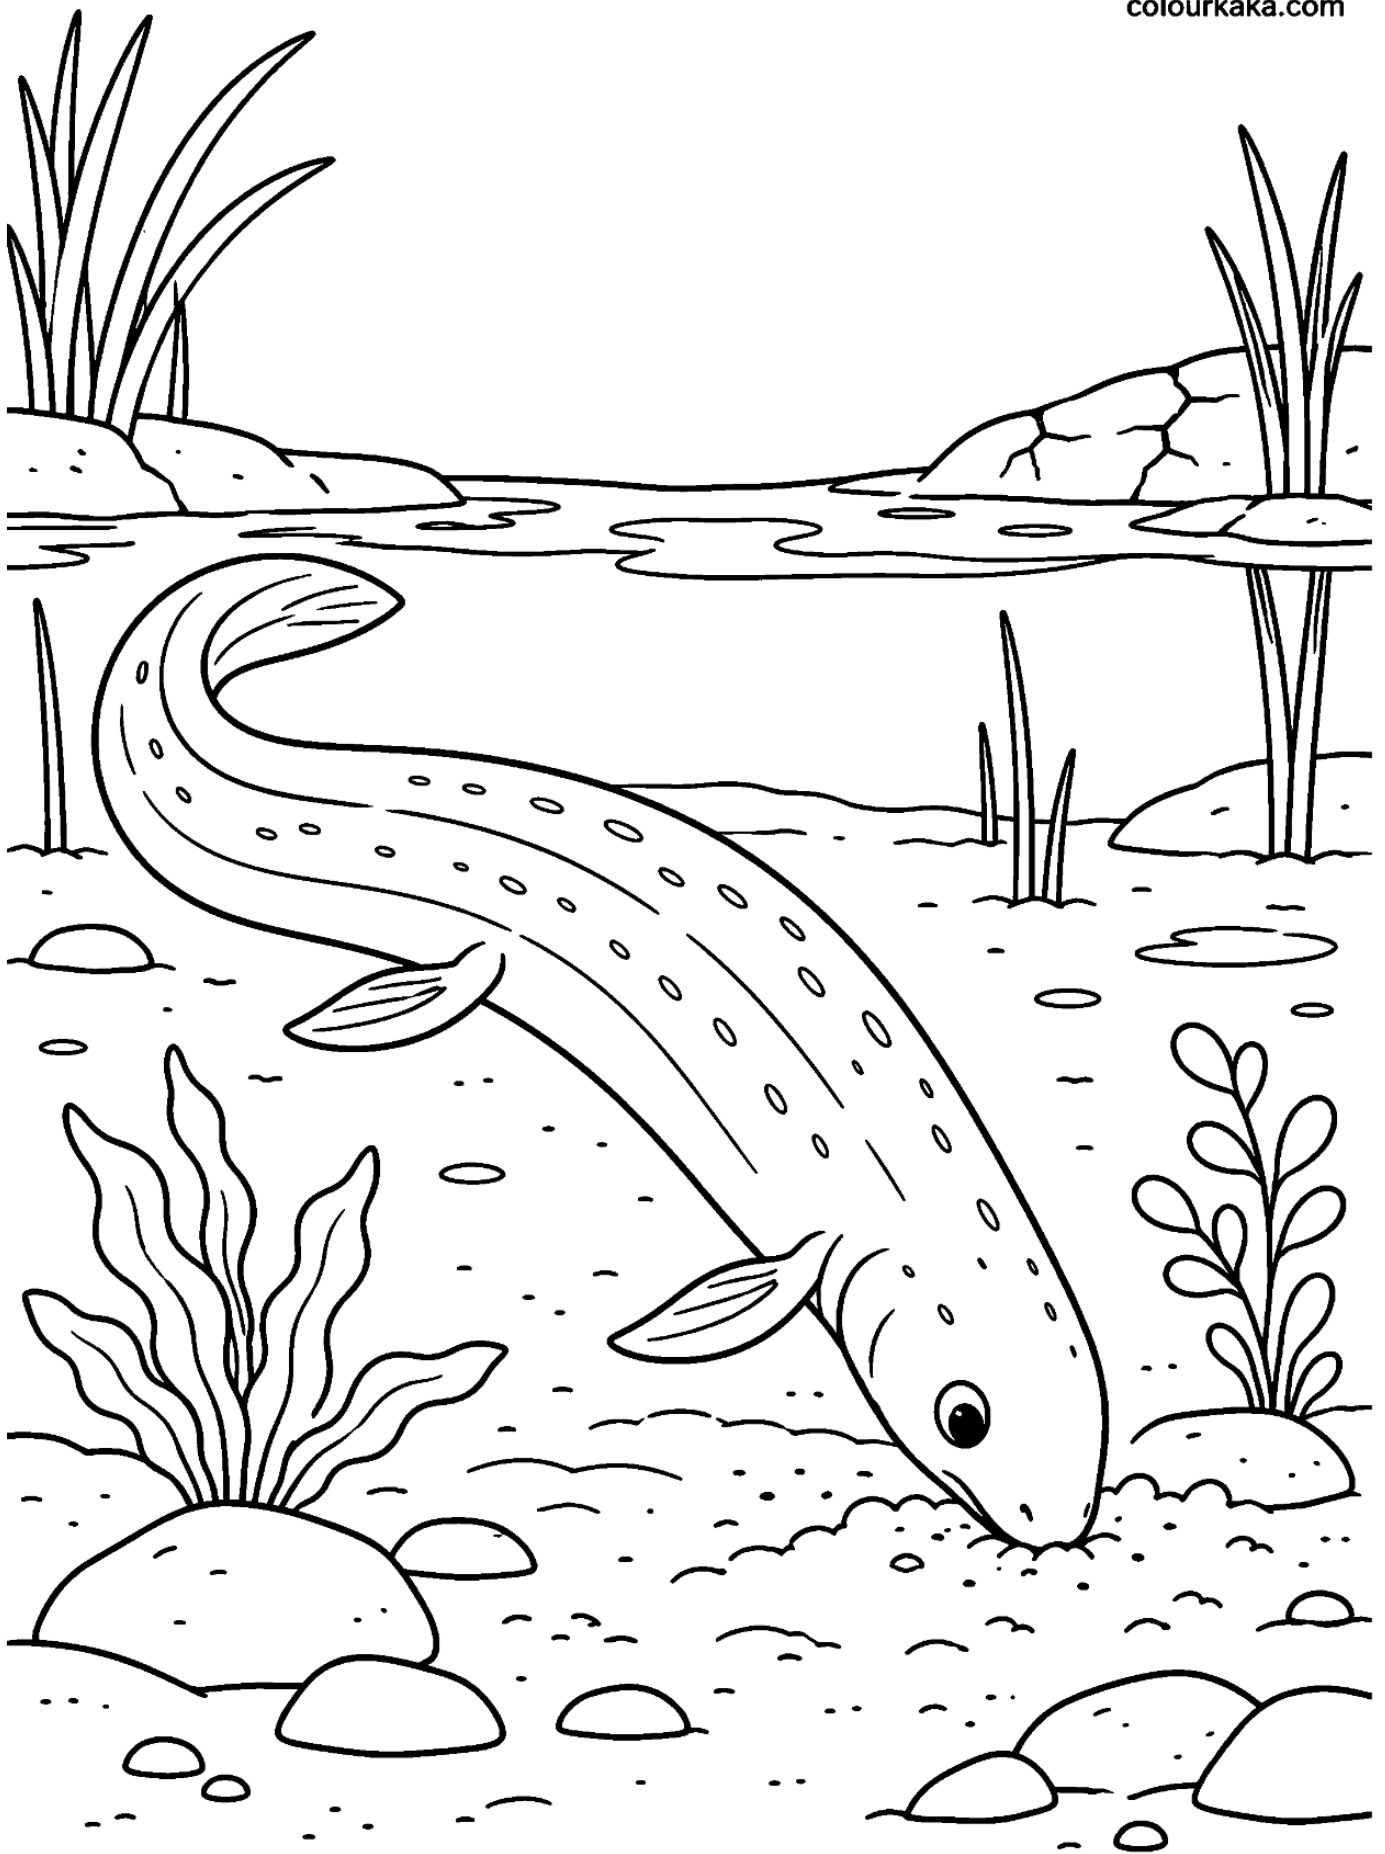

Where did the water go?

The pond gets smaller and smaller, leaving just a shallow, muddy pool.

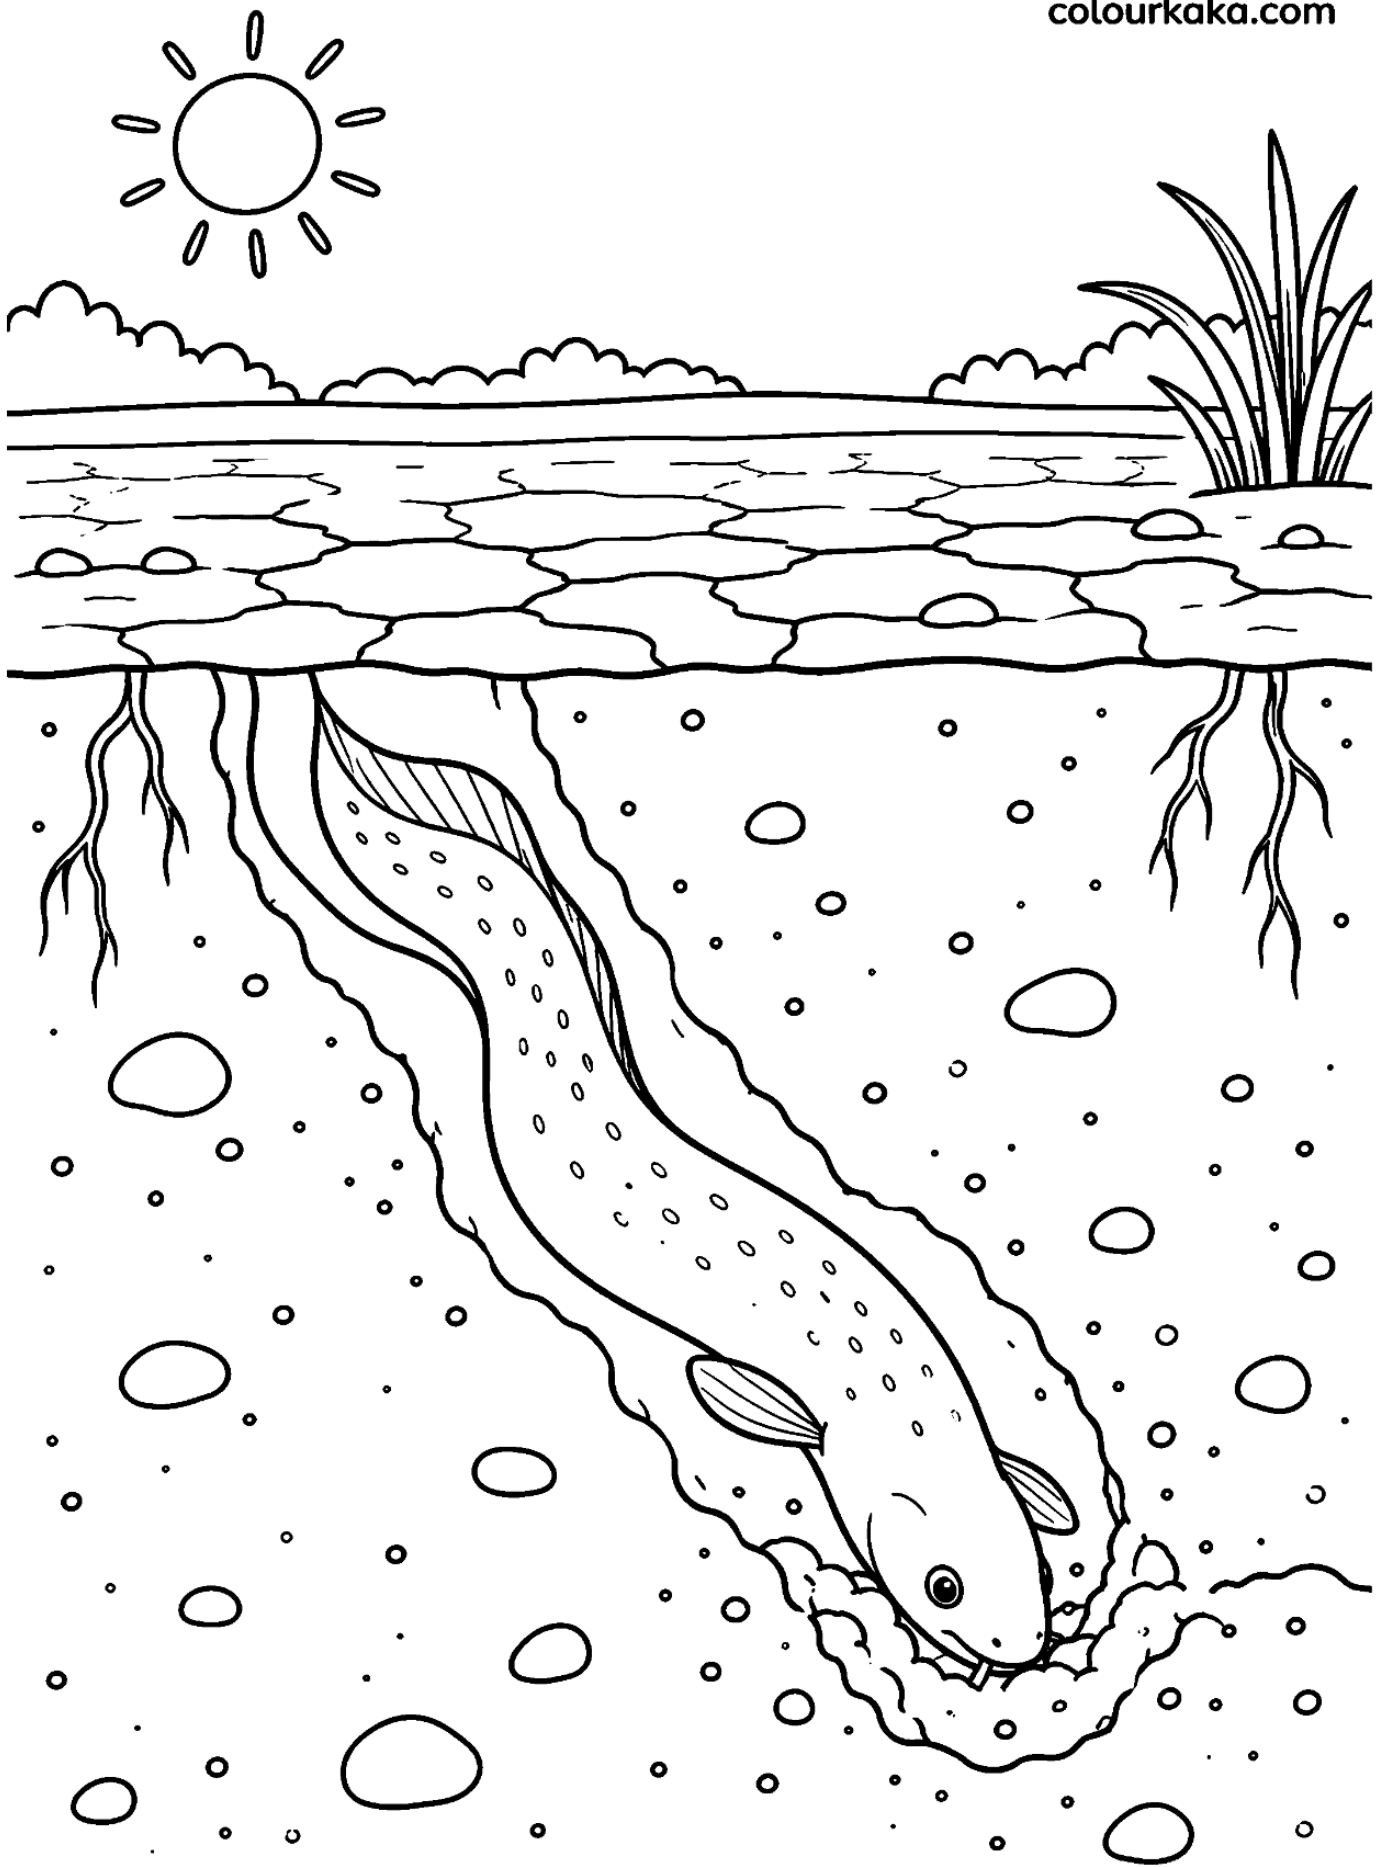

Gulp! A breath of air!

Amazing! This fish uses its lungs to breathe air at the water's surface.

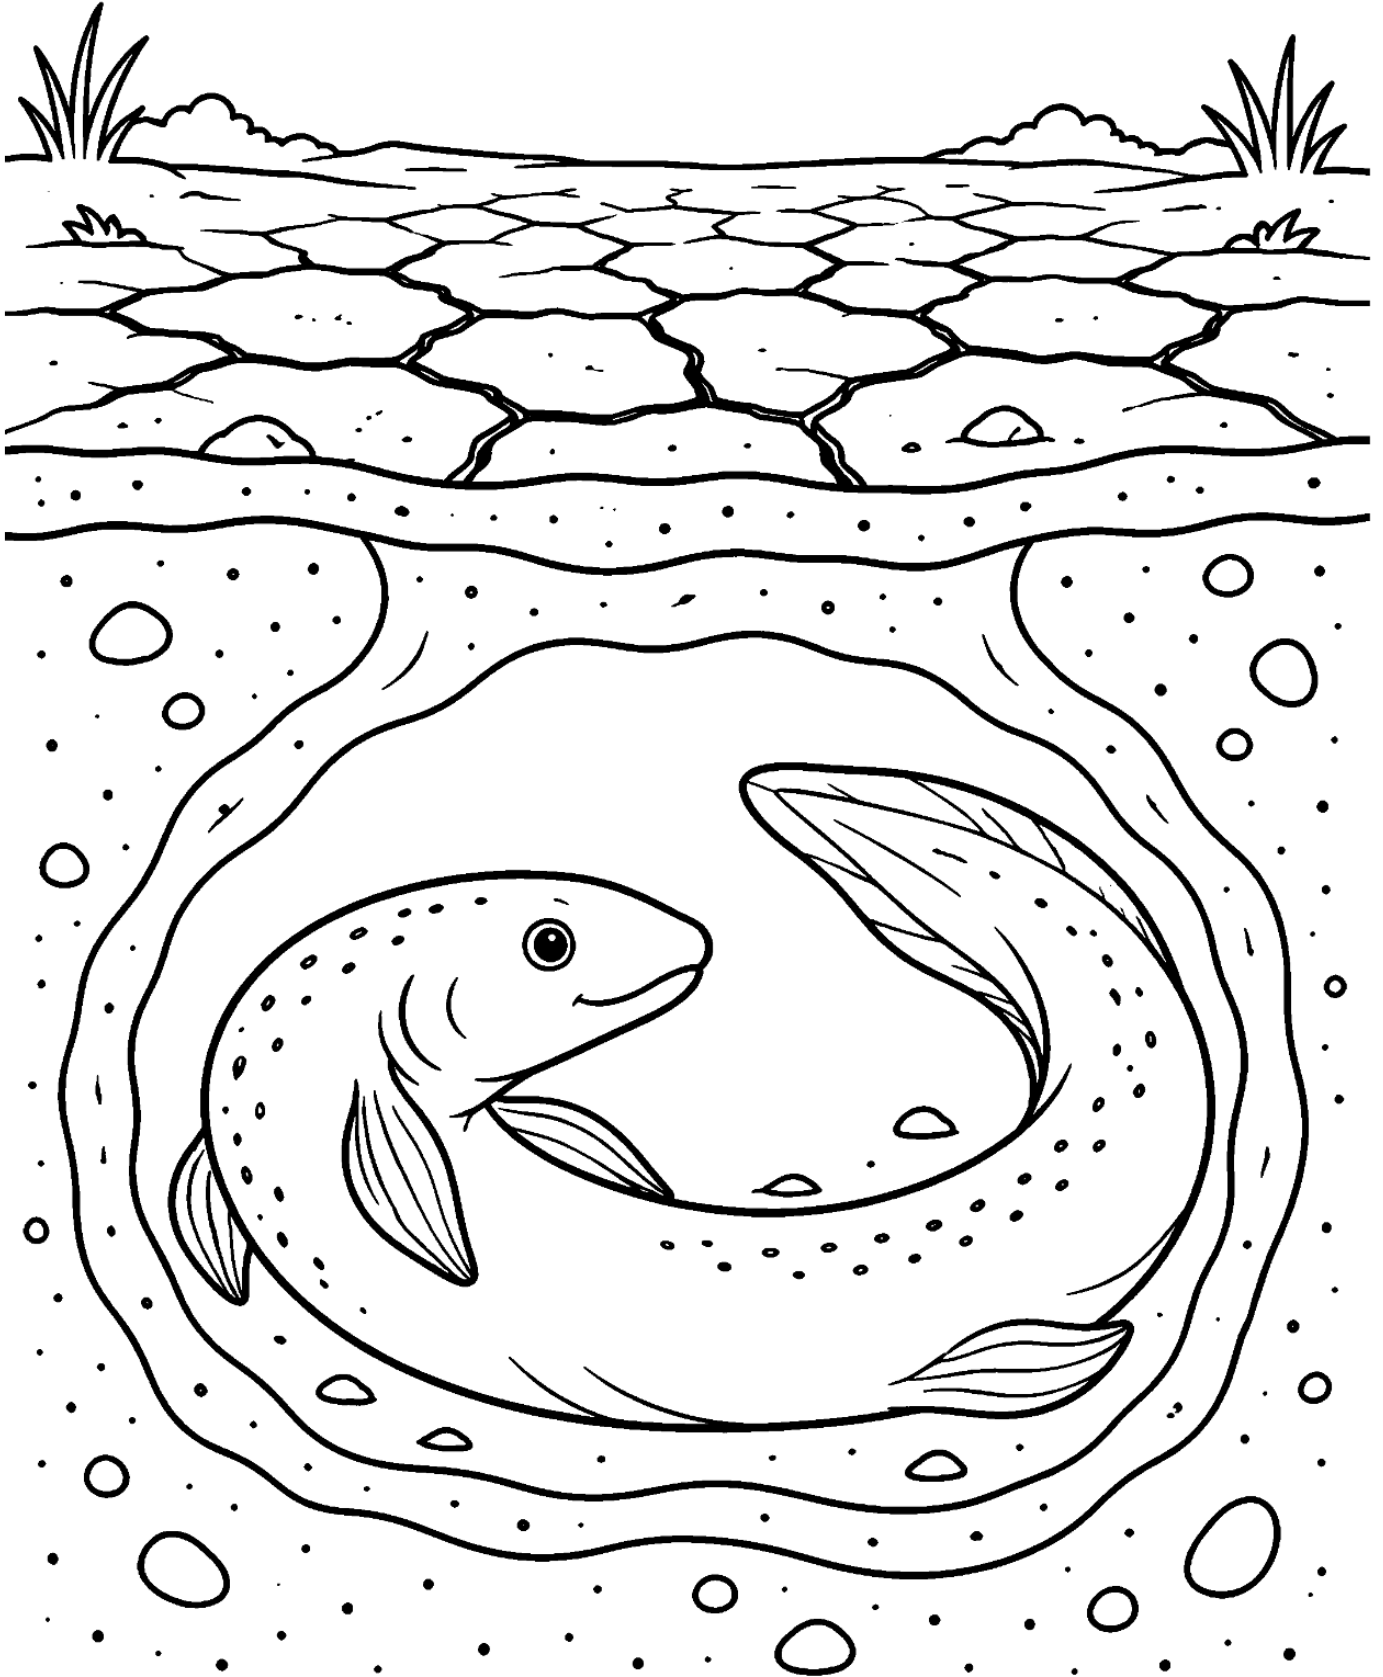

A perfect muddy spot!

The lungfish searches for soft mud where it can make a safe shelter.

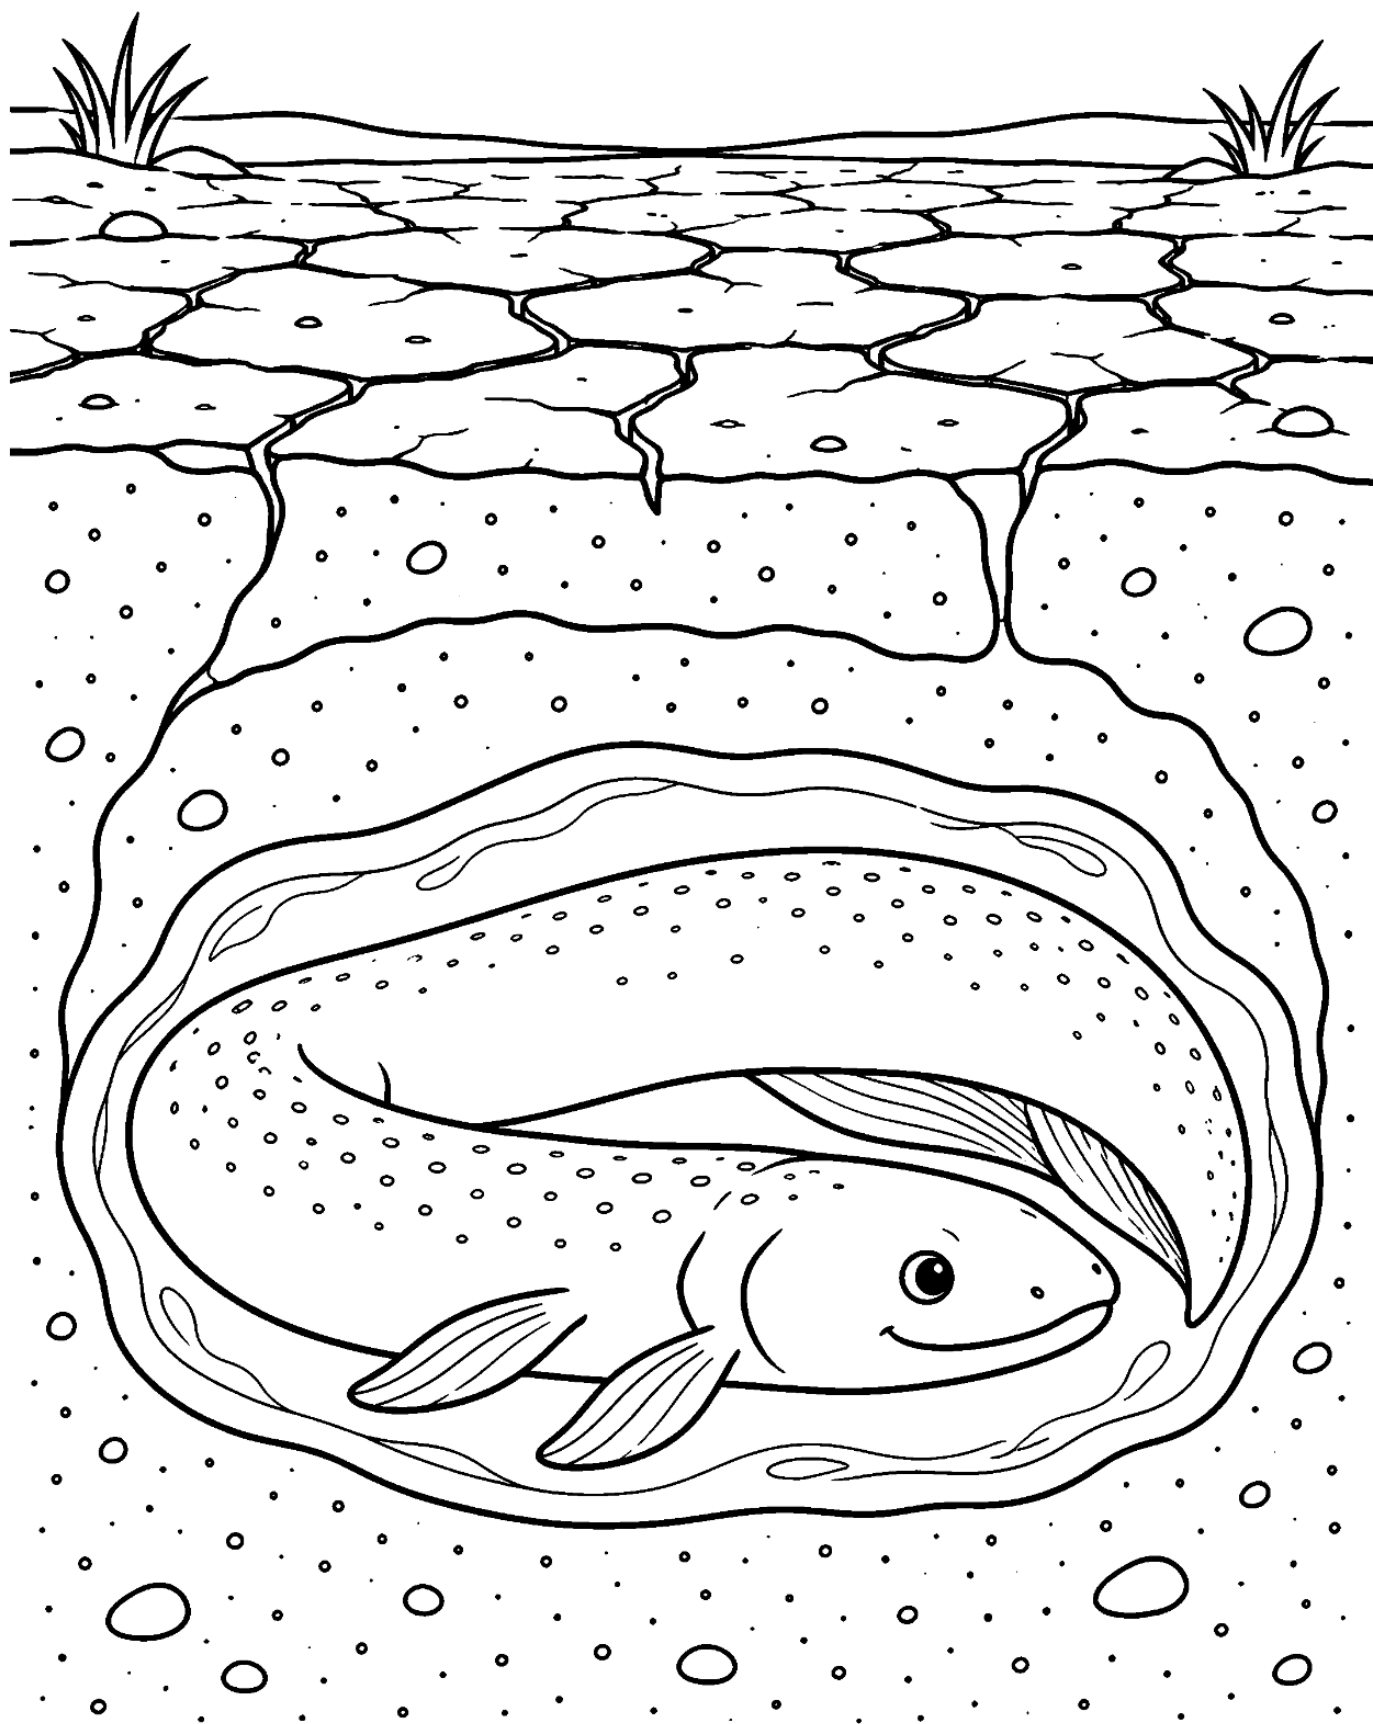

Down into the mud!

Headfirst it goes! The lungfish wriggles into the mud to make a burrow.

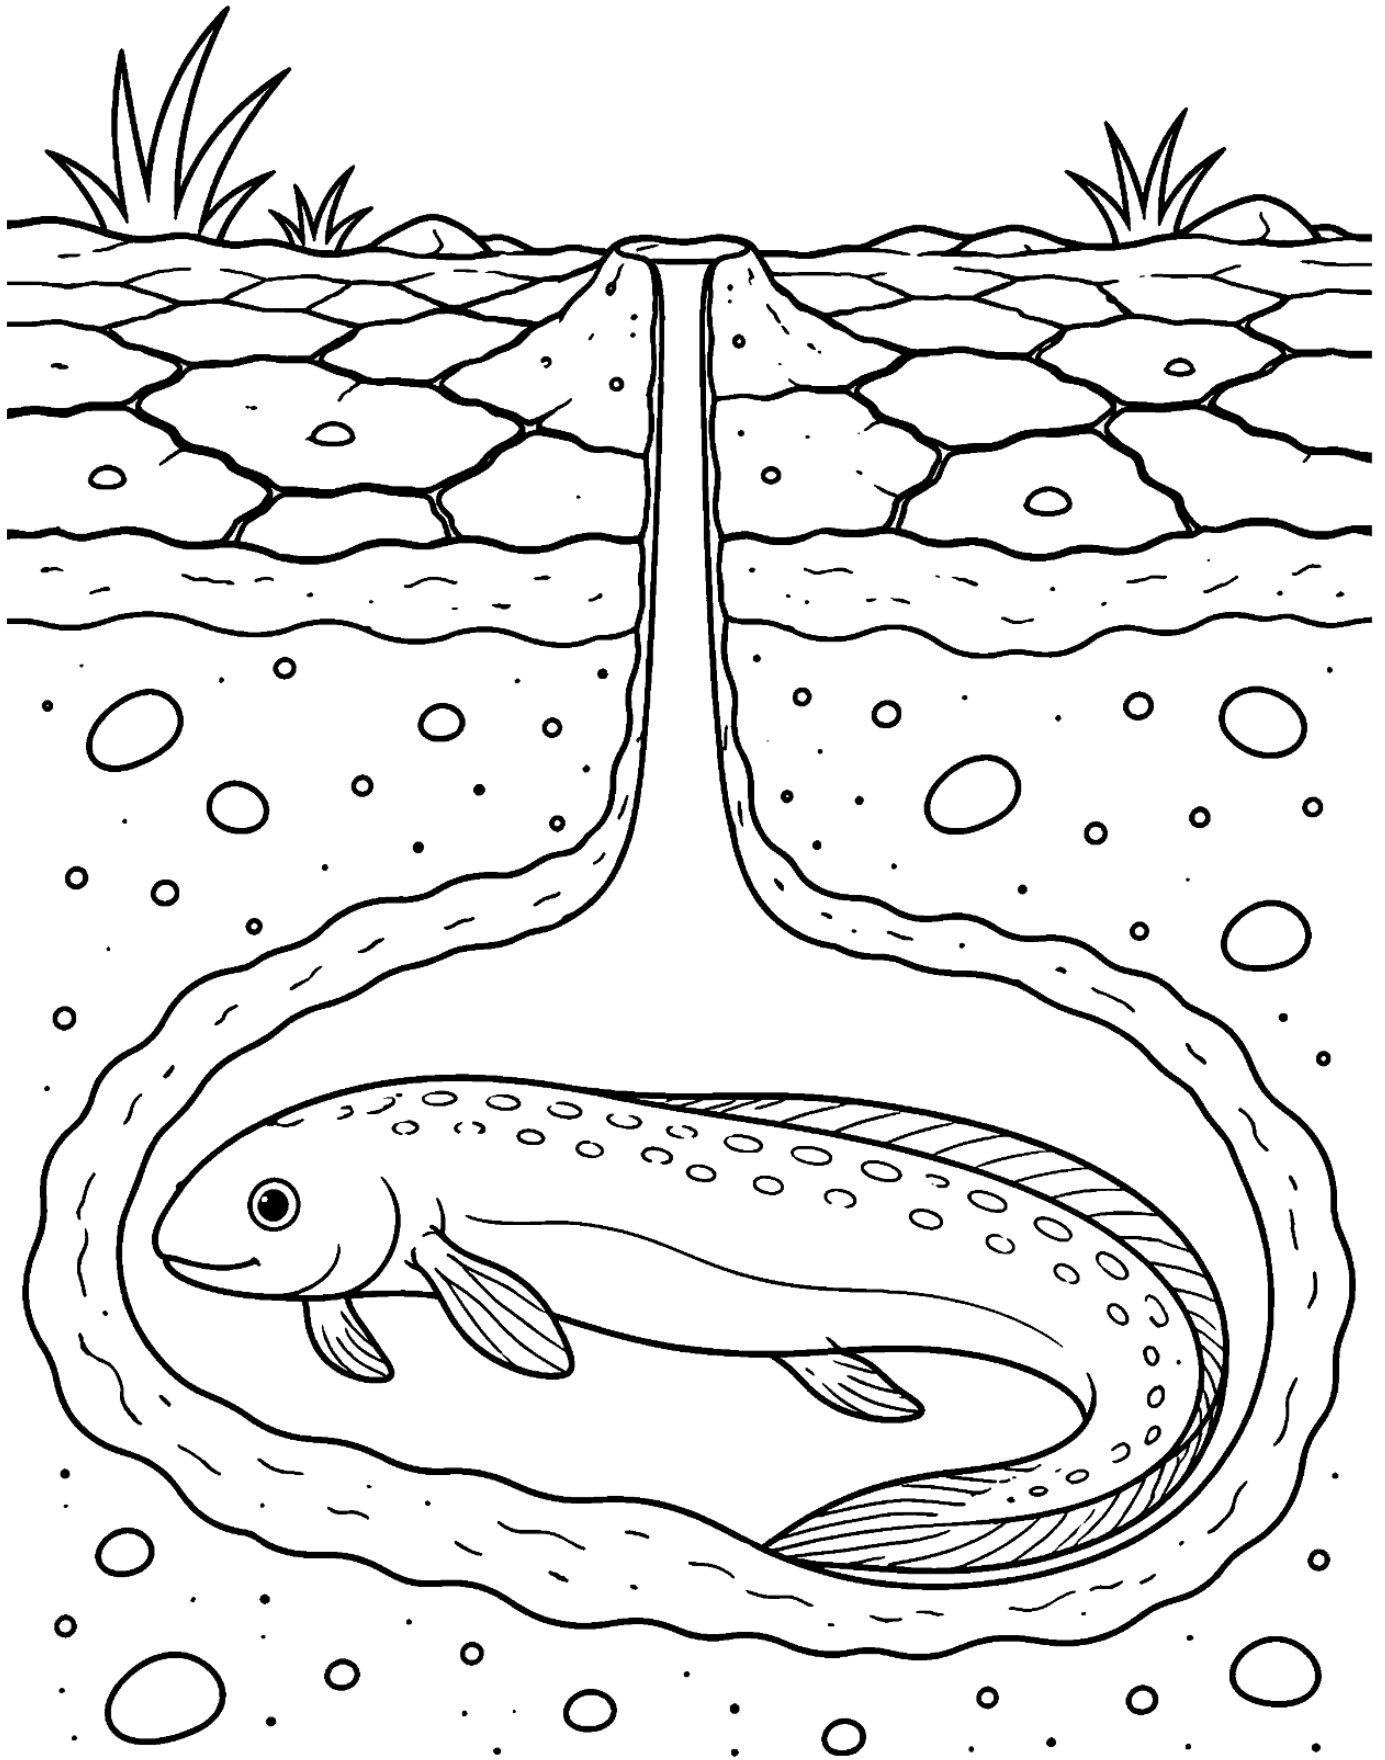

Snug in a mud room!

Deep underground, the lungfish curls up inside its little chamber.

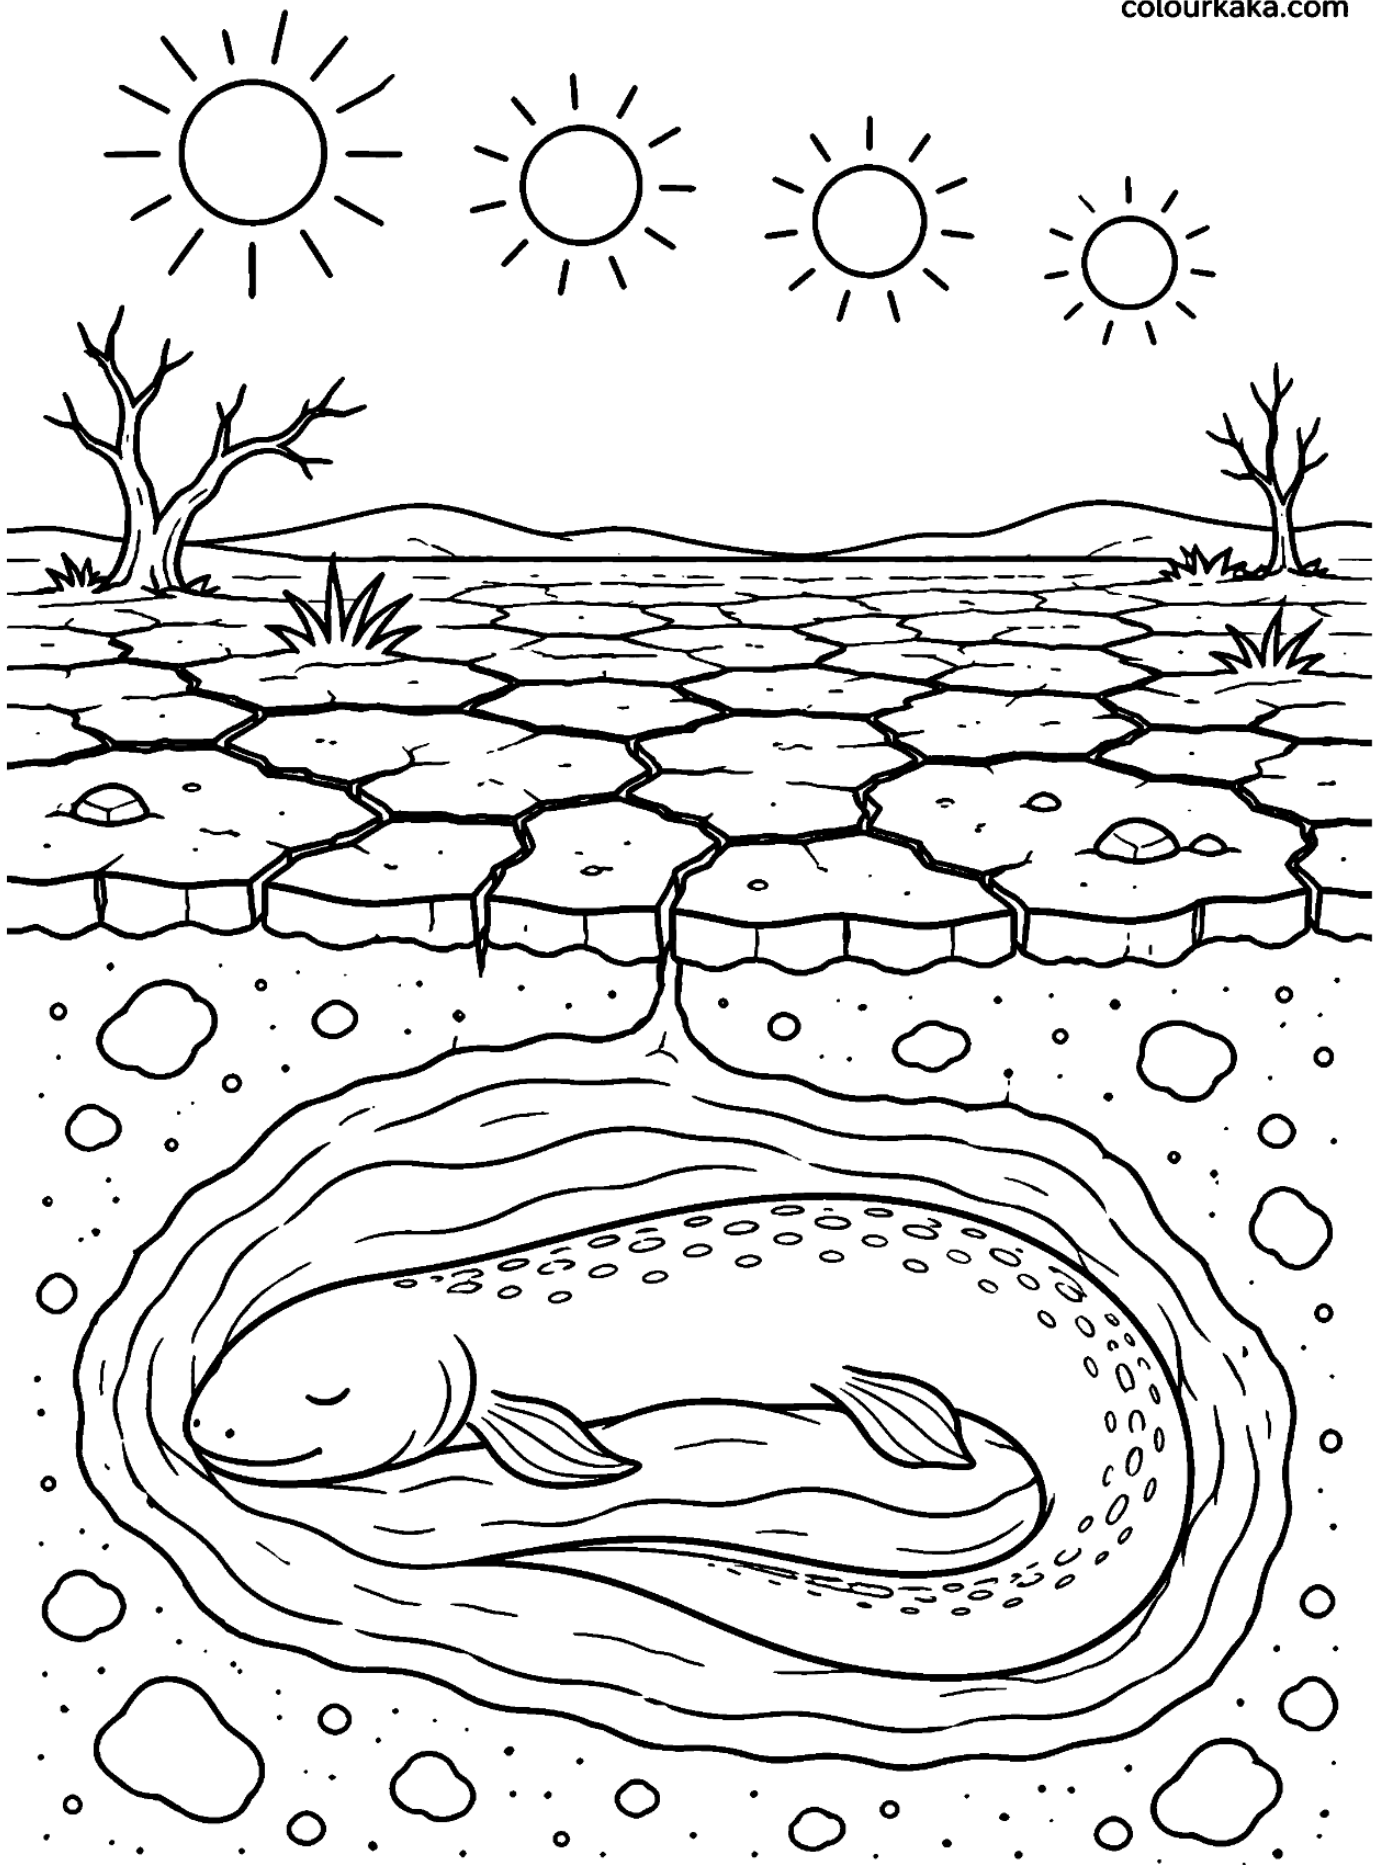

Wrapped up safely!

A mucus cocoon helps keep the resting lungfish from drying out.

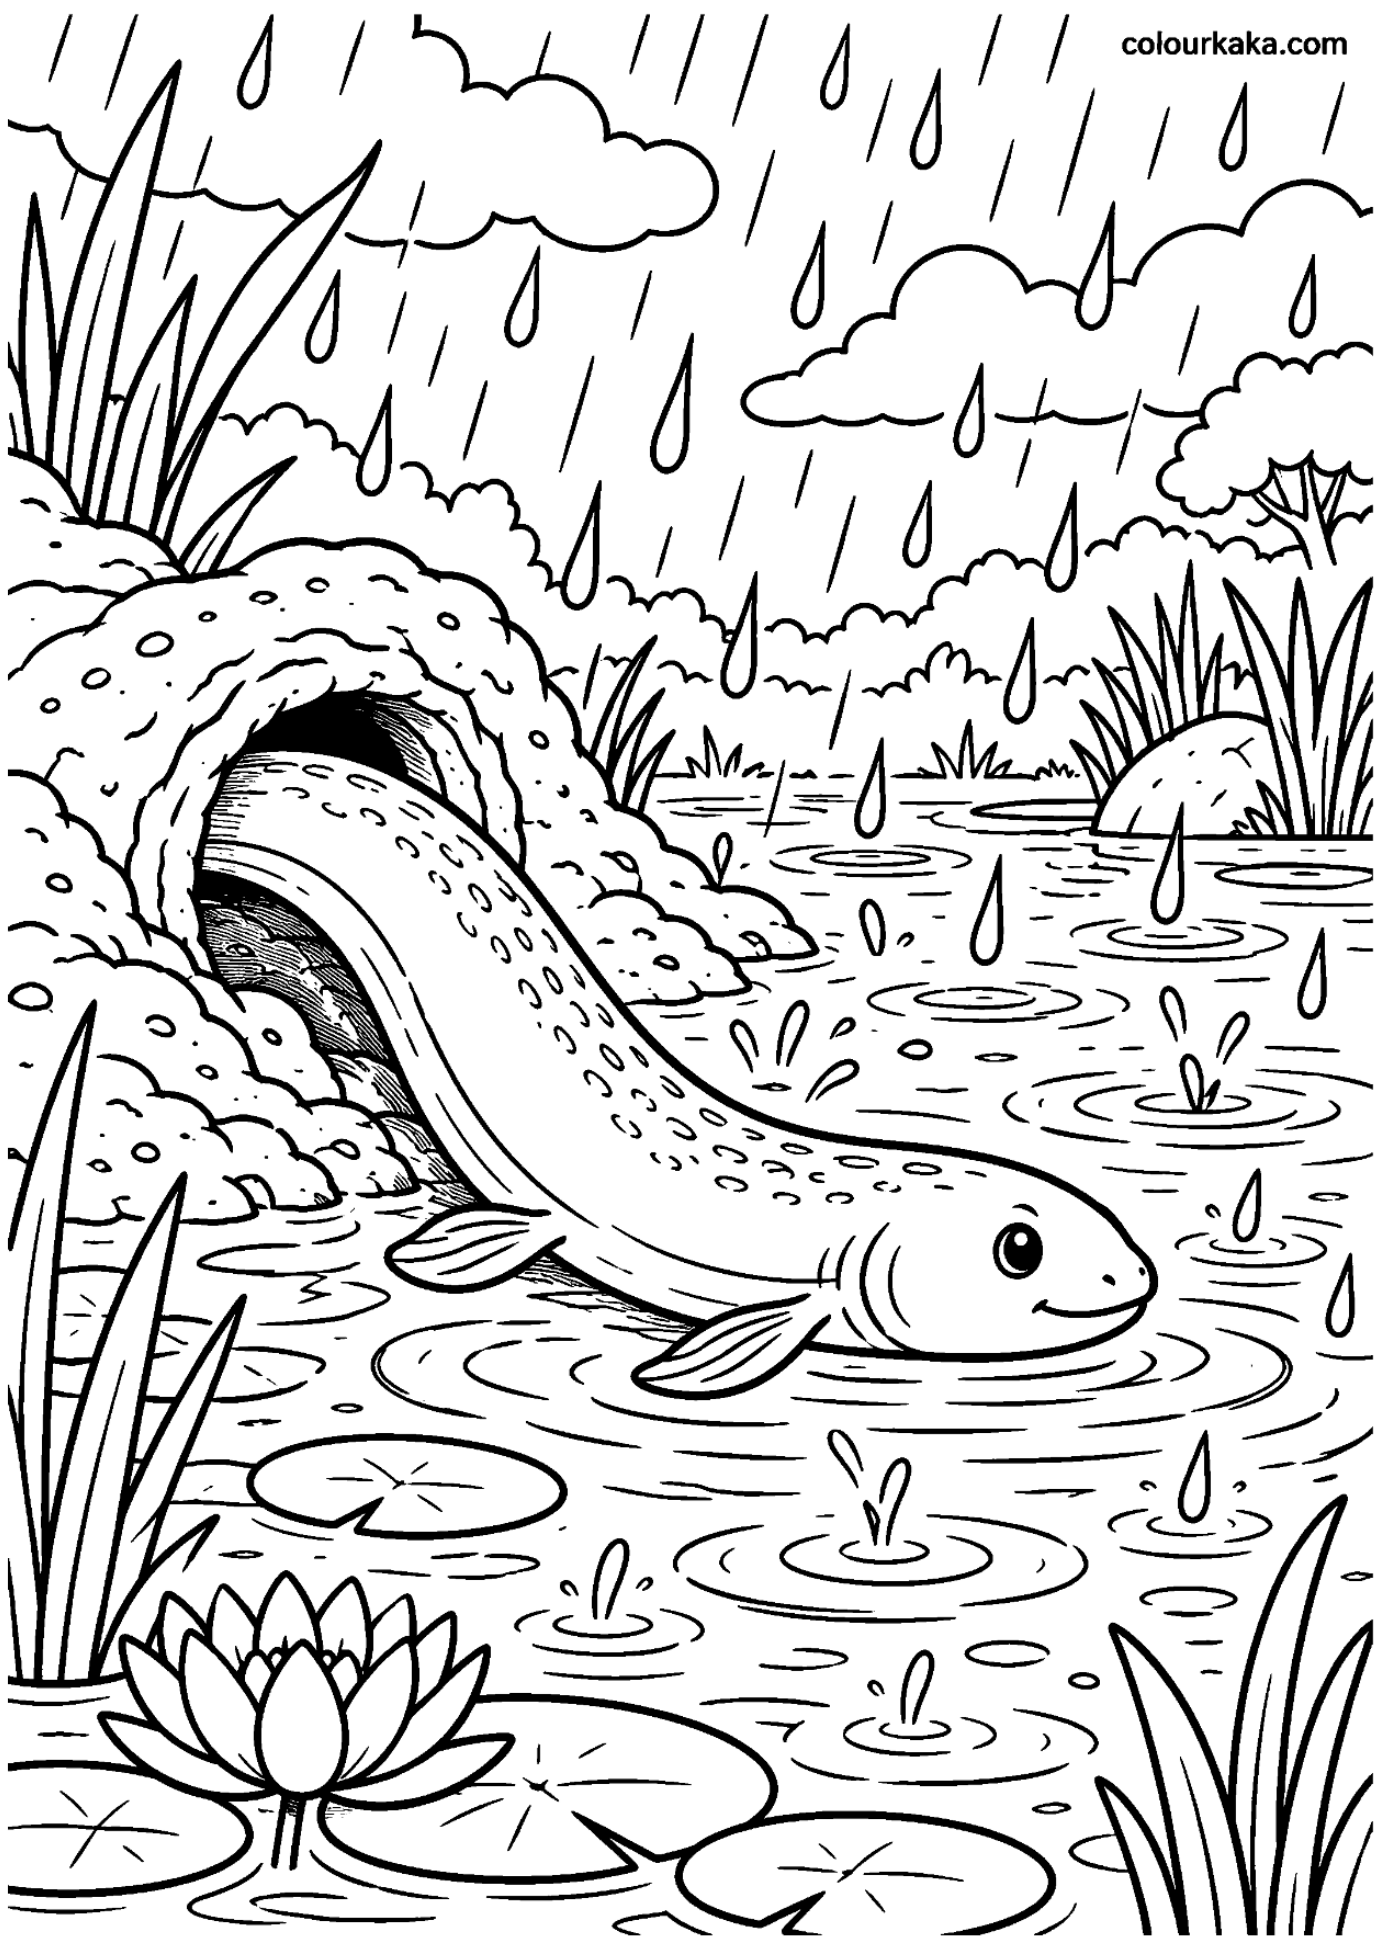

A tiny tunnel for air!

A narrow air passage lets the lungfish breathe while hidden underground.

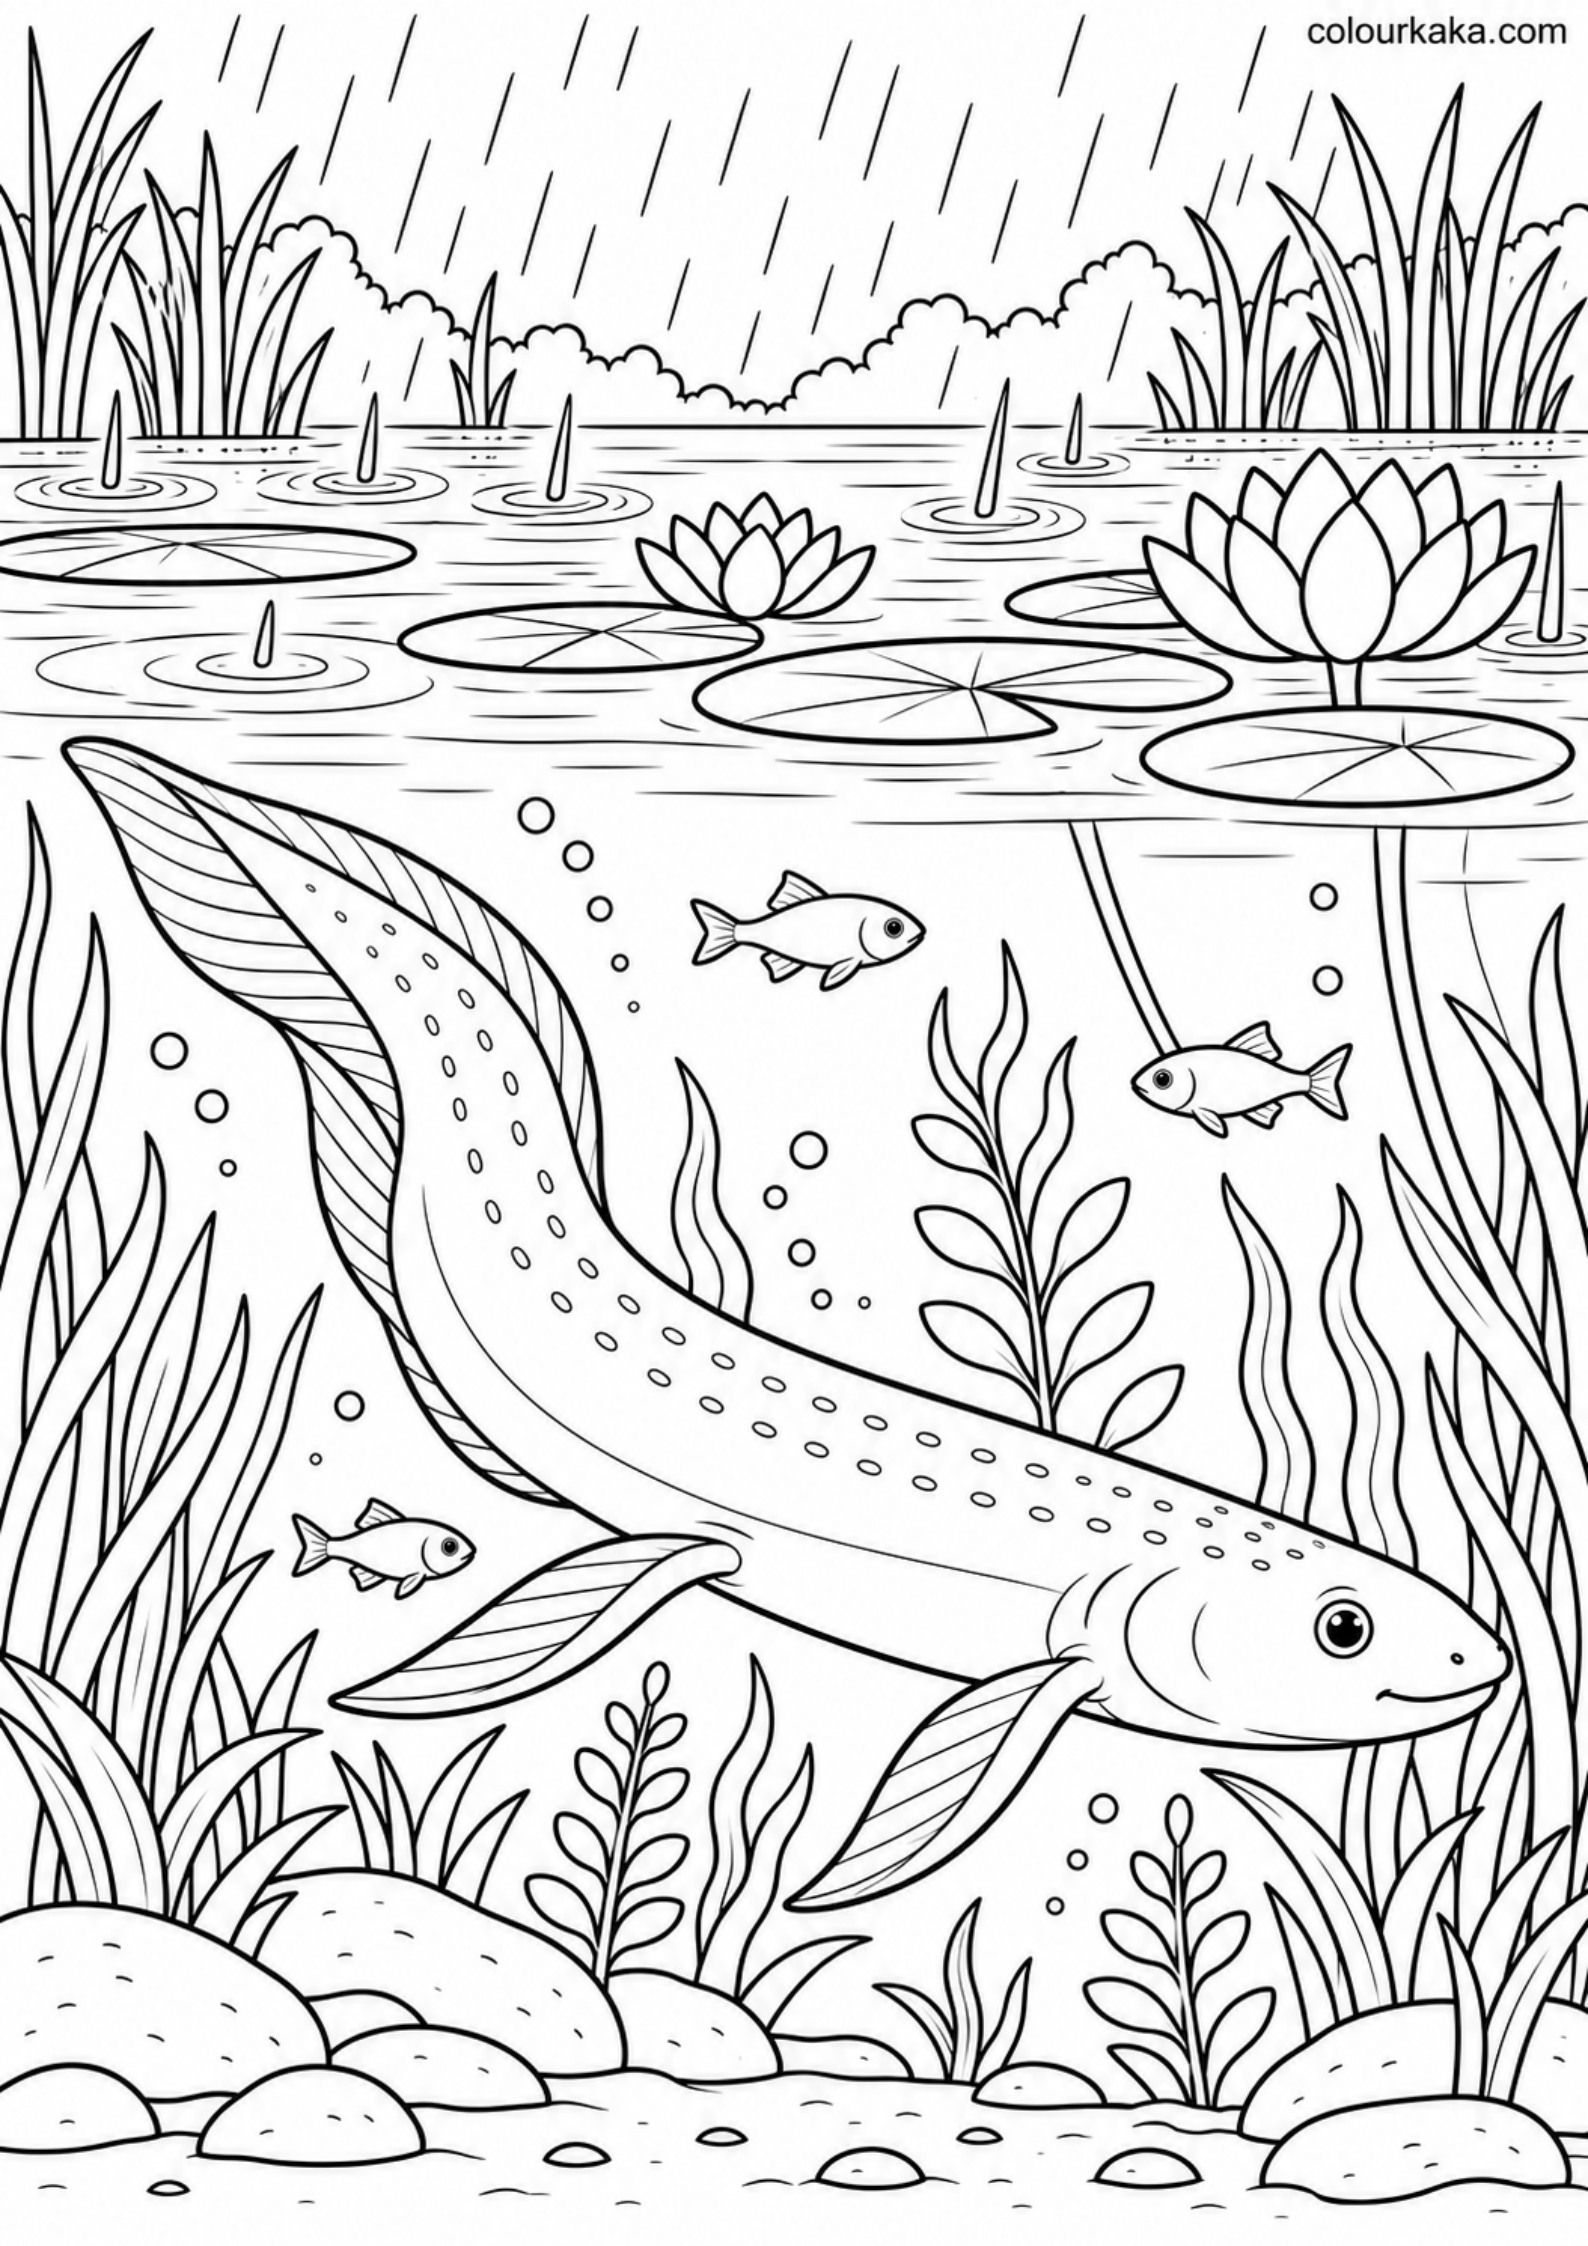

Shhh... sleepy time!

The lungfish saves energy for months. This survival rest is called aestivation.

Hooray! The rain is back!

Rain refills the pond. The lungfish awakens and swims again!
